

THINNERS & SOLVENT BASED ADDITIVES

LACQUER THINNER

Superior quality all purpose thinners designed for use with our Magna-Shield®, LOW VOC lacquers and most other lacquers including modified acrylics. For Water-Clear or acrylic lacquers, Lacquer Thinner #2 is recommended. Also excellent for neutralizing or washing of furniture and millwork surfaces after stripping, in preparation for refinishing, though our Wash Thinner offers improved performance and cost economy for neutralizing after stripping.

Each blend uniquely designed and balanced to accommodate weather condition(s) or changing weather conditions, type of lacquer, and finishing demand. **IMPORTANT, ALL LACQUER THINNERS ARE NOT THE SAME!** Wrong ingredients within a lacquer thinner can swell a pre-cat lacquer causing inferior flow out, orange peel, hazy film and/or bubbles. For example, too much acetone, alcohols or aliphatic solvents in a blend can cause these effects. For best results, and productivity, do not mix our lacquers with thinners and additives from other suppliers - always stay within same product line. To learn more details visit our website.

For most applications and weather conditions, Lacquer Thinner #1 is perfect. When it gets extremely hot and humid (in combination), Lacquer Thinner #2 is recommended. However, at 100% relative humidity or while raining, avoid spraying altogether, if possible, or if not possible, avoid using thinners altogether and substitute the Magna-Shield® Retarder, not exceeding 10% by volume.

CAT#	DESCRIPTION	APPLICATION	SIZE
90301	Lacquer Thinner #1	All Year Round Lacquer Reducer, Neutralizing After Stripping	Gallon
90305	Lacquer Thinner #1	All Year Round Lacquer Reducer, Neutralizing After Stripping	5 Gal Pail
90355	Lacquer Thinner #1	All Year Round Lacquer Reducer, Neutralizing After Stripping	55 Gal Drum
90501	Lacquer Thinner #2	Extremely hot & humid weather	Gallon
90505	Lacquer Thinner #2	Extremely hot & humid weather	5 Gal Pail
90555	Lacquer Thinner #2	Magna-Shield®, & Water White Lacquers	55 Gal Drum

MAGNA-SHIELD® RETARDER

This unique, non-flammable lacquer retarder also benefits as an excellent flow out and no-blush solvent. That is, the benefit of three products in one. Use as an additive to our Quick Drying Wood Filler for brushing application.

Use as stand alone additive (up to 10% by volume) during hot and humid water (no thinning with lacquer thinner). Requires a fraction of the amount compared to other retarders, but, more important, will not leave a finish soft as others when properly used.

MS9905	Pail

BLUSH ELIMINATOR SOLVENT

Removes blush from sprayed lacquers, after the fact. It partially redissolves the lacquer then releases entrapped moisture. Spray a medium coat over the blushed lacquer. Levels orange peel and overspray too. Doesn't leave the film soft. Quick drying.

91301	Gallon
91305	Pail

FISH-EYE & WET SPOTS ELIMINATORS

A must for a furniture refinisher. The fish-eye eliminator prevents and/or stops fish-eyes caused by silicone contamination, while the wet spots eliminator stops and/or prevents wet spots caused by paraffin waxes found in finish removers (used to retard evaporation) and, in many furniture polishes.

FLOW OUT SOLVENT

Blend of specialty solvents designed to help fast drying lacquers flow out better, eliminating orange peel, pin holes, craters and air bubbles. Can also be spray applied over semi-dry lacquer via a medium coat, to level orange peel and/or improve partially dry film's surface imperfections.

91101	Gallon
91105	Pail

NO BLUSH SOLVENT

Add to conventional lacquers and Magna-Shield® to eliminate blushing while spraying in hot and humid weather. Contains no retarders hence will not slow down the drying time nor leave the finish soft. Add 4 to 6 oz. per quart of thinned lacquer or sealer. Slight blushing may occur on very hot and humid days but will disappear upon drying.

LACQUER & POLYURETHANE/VARNISH FLATTING AGENT

Excellent flattening additive for use with all our solvent based finishes (Magna-Shield and Low VOC Lacquers, and EVERLAST Wood Finish), clear or pigmented. Allows control of finished sheen by adding prescribed amount to a finish prior to application.

Follow label directions prior to use.

For Magna-Shield® and Nitrocellulose Lacquers
